

Dear Market Advisory Committee,

Thank you for your efforts to combat global warming. I favor a cap-and-trade system, and believe it must be accompanied by a carbon tax. Only when our economic system accounts for the environmental and health impacts of carbon will the market forces adequately support the drastic changes that are needed to save our way of life.

I also believe that carbon offsets, while useful in the short term as the market adjusts to the new model, should not be permitted to permit organizations from fundamentally altering the way they manage production and consumption.

Thank you for the opportunity to comment.

Sincerely,

Gina Blus
